There are always demands for more 'gain' - the search for the perfect distortion sound that never ends. DisTorTion by Audiopluginshop brings massive amount of gain for demolition.

DisTortTion clips the input signal by increasing the signal to maximum overload. Adding musical harmonics and overtones while still maintains the characteristics of the

originalsound, or not. All the varying parameters are streamlined into a uniform 4 knob parameters plus a stereo VU Meter and a frequency Analyzer, to cover every tone which are essentials for any guitarists (even synth-players).

Features

- **Drive :** Up to 16x oversampling

- **Range:** Controles the frequency range

- **Blend** : control the wet signal

- **Volume:** output volume controle

System Requirements

Mac:
• OSX 10.6.8 or later
• Core Duo 2GHz
• 2 GB RAM / 500 MB HD
